

Digta Station LAN

Fast transmission of dictations without a PC

Digta Station LAN

The easiest way to communicate with your typist

Send dictations to your typist with the new Digta Station LAN without even touching your PC. Simply return your Digta 420/415 to the docking station and your speech files will be automatically transferred. Set up the docking station in a conference room, lobby or other strategic site to optimize workflows and save time. Most systems rely on a PC to transfer data – thanks to the docking station's LAN connectivity you just need to plug and play.

Dictation workflow made easy:

- Uncomplicated network integration
- Send digital speech files to your filed contacts via e-mail or FTP-server
- Transfer digital speech files without using an expensive workstation
- Optimized workflows and time saving through short distances
- Comfortable web browser-based configuration and maintenance
- Central administration of multiple Digta Stations LAN

Dock your dictation machine into the station and transfer your speech files into the network without a PC

For Digta 415 and Digta 420

The Controls

Technical data

Compatible devices	Digta 415, Digta 420
Supported Transmission protocols	SMTP - transfer via e-mail FTP – transfer to an FTP-server (active-/passiv-mode)
